# 10 Inspirations

<http://www.typ.io/>

I like how this website has everything centered neatly to present good imagery.

<http://ifontyou.com/>

I like how this website has categories for the fonts.

<http://www.typeconnection.com/matches.php>

I like how this website has an image of the type combinations, as well as an explanation. It is very cool how the images will bring up an explanation when clicked.

<http://www.typemachine.com/>

I like the cleanliness of this website along with the block style graphics.

<http://www.fontsquirrel.com/>

I like how the font is actually being used and with it's size. I think this may be useful on my website, if possible.

<http://www.fontshop.com/>

I like how this website has a main page that presents a few popular font with images. I'm not sure I will be using something like this, but a splash page may be cool.

<https://www.google.com/fonts>

The big thing I like about this website is the filter options. I think a filter could be useful.

<http://www.fontspace.com>

I like how this website includes a popular font category at the top. This may be useful to have something like this on my website.

<http://www.impallari.com/>

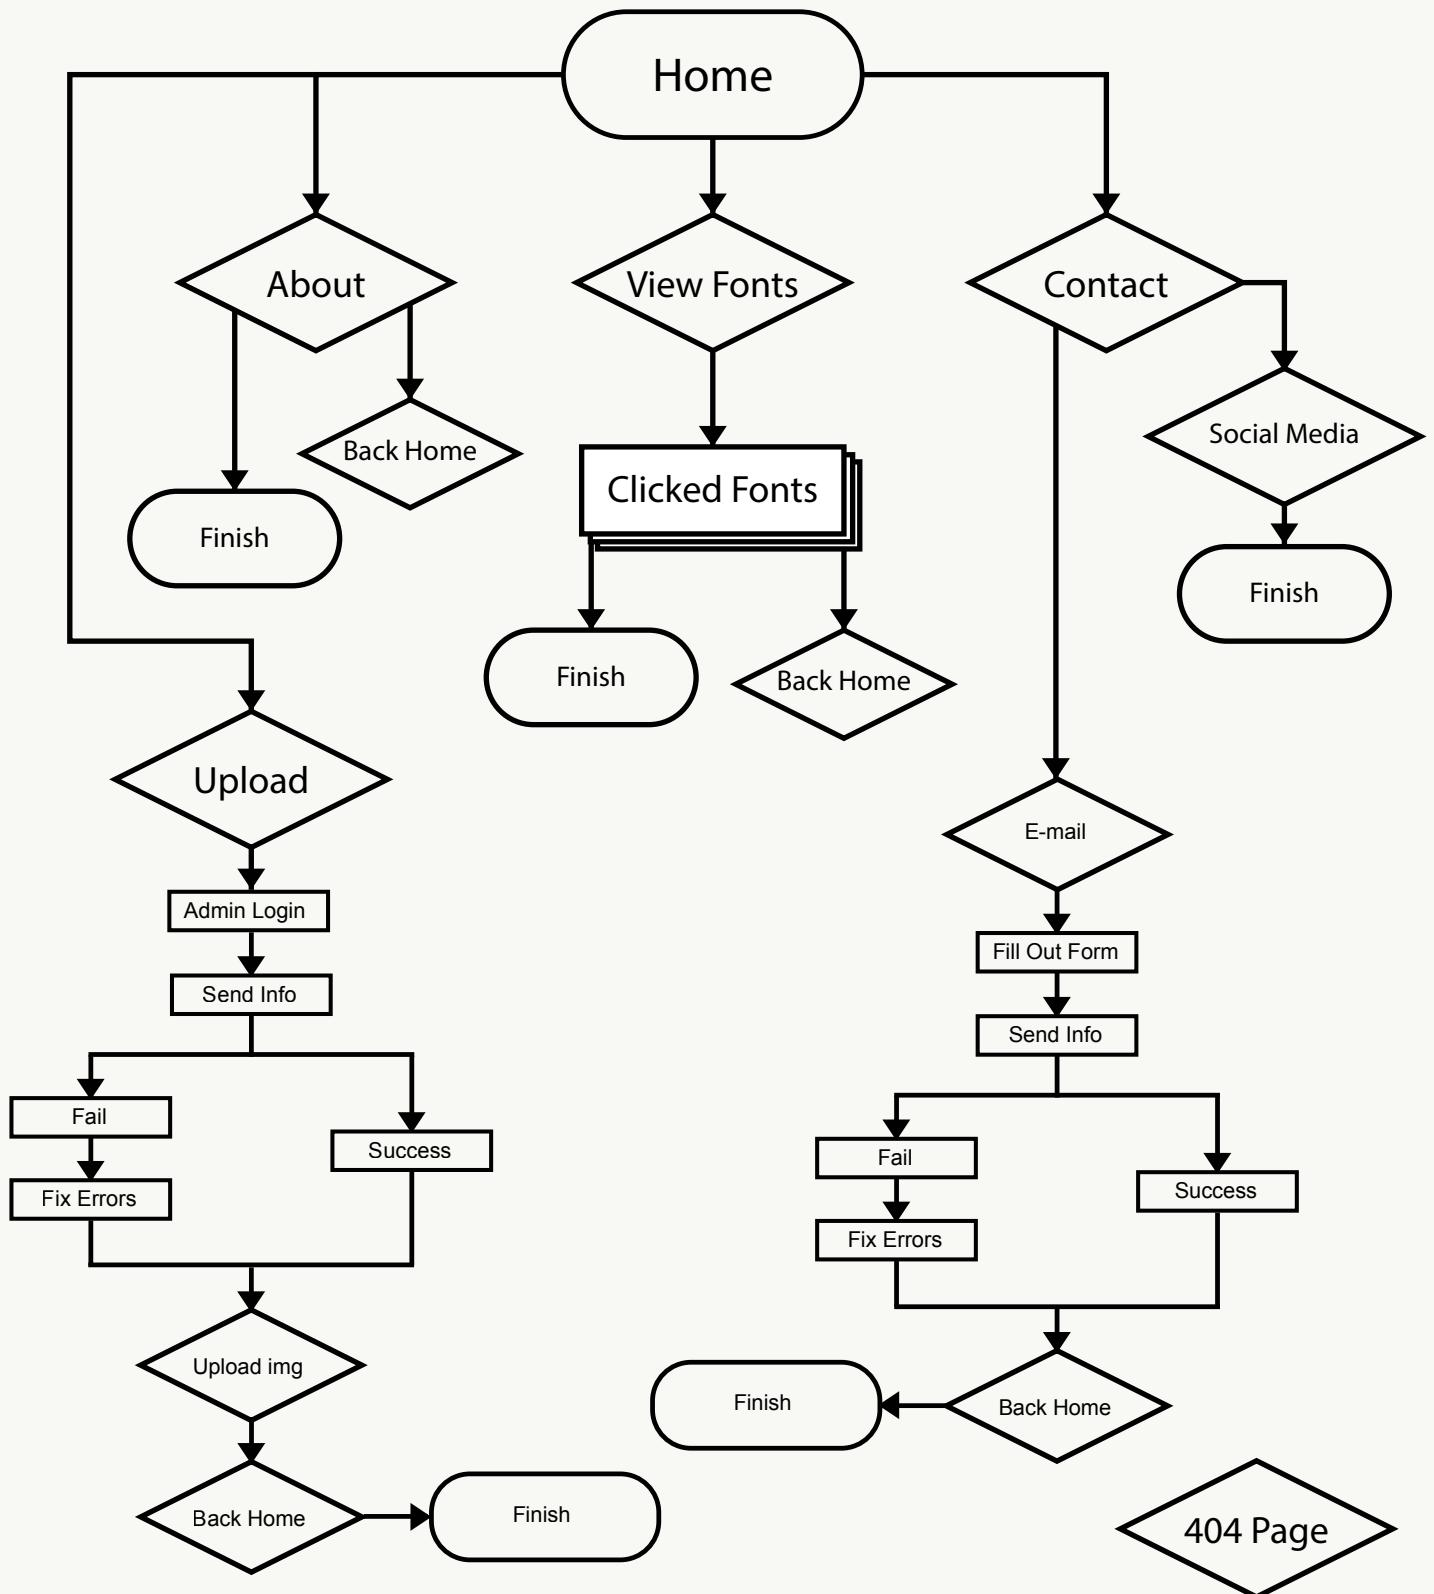

I really like how the imagery is very simple on this website, but it still show the fonts used in different color.

<http://www.fontspace.com/popular/fonts>

I like how this website includes an image with the actual font being used. This could be really a cool way to do my website.
